

ENVIRONMENTAL CHECKLIST FOR POULTRY OPERATIONS

To provide environmental benefits, conservation practices need to be operated and maintained as designed. The following checklist describes some common problems to watch out for in the production area of poultry operations. NRCS and Soil Conservation District staff are available to provide follow-up assistance if needed. (See the back of this sheet for the NRCS/SCD contact list for the Delmarva Peninsula.)

Manure Storage

Manure removed from poultry houses should be stored in a covered shed until it can be applied to crops or otherwise utilized.

The	following	are	potential	problems	vou may	see:

de t	Manure piled outside of shed.
	Manure stacked too high against walls.
	Shed contains equipment or supplies that are <u>not</u> easily moveable (e.g., not on wheels).
	Obvious surface water conveyance near the open ends of the shed to a drainage ditch or swale.

Composters

Properly operated composters provide an environmentally sound method for disposing of normal mortality from poultry houses.

The following are potential problems you may see:

3
Leakage.
Excessive odor or flies.
Dead birds visible.
Evidence of animals feeding on dead birds.
Thermometer not readily available (DE only).
Recipe sign not posted (DE only).

Concrete Pads

When installed and maintained in good condition and kept clean of manure, concrete pads at the ends of poultry houses and manure sheds can reduce erosion and protect surface and ground water from contamination.

The following are potential problems you may see:
 ☐ Manure present on pads. ☐ Obvious surface water conveyance near the open ends of the poultry houses and manure
sheds to a drainage ditch or swale. Concrete cracking or breaking off.
Windbreaks
Windbreaks, or vegetative environmental buffers, are planted around poultry houses to provide shelter from winter winds; reduce particulates, ammonia, and other odors from tunnel fans; create visual screens; and provide shade to reduce extreme summer heat.
The following are potential problems you may see:
Trees dead, dying, or damaged (e.g., broken off, mowed over, bagworms, etc.).
Lack of weed control around trees.
Irrigation system not functioning (e.g., major leaks, broken lines, etc.).
☐ No irrigation system.
Other Concerns
Other issues that may result in environmental concerns include, but are not limited to:
☐ Manure scattered around the production area.
Manure runoff visible.
Roof runoff problems.
Lack of good vegetative cover for filtering storm runoff between waste storage structures, composters, or ends of the poultry houses, and drainage outlets.
Overall farm appearance (a farm that "looks good" is less likely to generate complaints from neighbors).
Any other problems or issues at the farm?
Conservation Practices Needed?
Concrete Pads. Windbreaks.
